Brief Therapy and Eating Disorders	-Barbara McFarland	1995	In Brief Therapy and Eating Disorders, Barbara McFarland offers practitioners the necessary tools to provide brief, clinically sound eating disorders treatment. Drawing from her own clinical experience as the founder of The Eating Disorders Recovery Center, she demonstrates how solution-focused brief therapy is one of the more efficient approaches in treating eating disorders. Instead of focusing on client pathology and deficits, this approach operates on the assumption that eating disorder clients have the necessary internal resources to create unique solutions to their problems. The author believes that clinicians must begin with the least intrusive treatment interventions and work diligently with clients to determine treatment goals that are salient to them.	-Clinicians/ Clients	2

Unknown to her family and friends, however, Caroline was bulimic and spent many solitary years pursuing her addiction to bingeing and purging large quantities of food before it almost killed her. My Name is Caroline is the inspirational story of how she managed to admit her shameful secret to her husband and family, and then seek help. "I'm Like So Fat!": Helping Your Teen Make Healthy Choices about Eating & Exercise in a Weight Obsessed World	-Dianne Neumark-Sztainer, PhD	2005	It's hard to decide which is more frightening--the "food" teenagers enjoy, or the things they say about their bodies. Whether it's your son's passion for chips and soda or your daughter's announcement that she "feels fat," kids' attitude about how they look and what they should eat often seem devoid of common sense. In a world where television and school cafeterias push super-sized sandwiches while magazines feature pencil-thin models, many teens feel pressured to starve themselves and others eat way too much. Blending her experience as the mother of four with results from a survey of nearly 5,000 teens, Dr. Diane Neumark-Sztainer shows you how to respond constructively to "fat talk," counteract negative media messages, and give your kids the straight story about nutrition and calories, the dangers of dieting, and eating right when they're away from home. Full of examples illustrating the challenges teens face today, this upbeat and insightful book is packed with great ideas that will help kids everywhere feel better about their looks and make healthier choices about eating and exercise.	-Family Dynamics -Body Image -Young Adults -Children	1
Fat Talk: What Girls and Their Parents Say About Dieting	-Mimi Nichter	2000	Anthropologist Mimi Nichter spent three years interviewing middle school and high school girls—lower-middle to middle class, white, black, and Latina—about their feelings concerning appearance, their eating habits, and dieting. In Fat Talk, she tells us what the girls told her, and explores the influence of peers, family, and the media on girls' sense of self. Letting girls speak for themselves, she gives us the human side of survey statistics. Fat Talk takes the reader into the lives of girls as daughters, providing insights into how parents talk to their teenagers about	-Family Dynamics -Body Image -Young Adults Self-Acceptance -Media	1

			<p>their changing bodies. The black girls admired their mothers' strength; the white girls described their mothers' own "fat talk," their fathers' uncomfortable teasing, and the way they and their mothers sometimes dieted together to escape the family "curse"—flabby thighs, ample hips. Moving beyond negative stereotypes of mother–daughter relationships, Nichter sensitively examines the issues and struggles that mothers face in bringing up their daughters, particularly in relation to body image, and considers how they can help their daughters move beyond rigid and stereotyped images of ideal beauty.</p>		
<p>Over It: A Teen's Guide to Getting Beyond Obsessions with Food & Weight</p>	<p>-Carol Emery Normandi -Lauralee Roark</p>	2001	<p>Every year, desperate parents try to save their daughters from starving themselves to death. Yet every year, more girls eat less to look like their favorite supermodels. With this sobering fact in mind, Carol Emery Normandi and Lauralee Roark developed this book based on their ongoing workshops and the feedback of hundreds of young women. They look at the behaviors that may lead to eating disorders and the cultural, emotional, and physical reasons girls obsess about weight and eating. They go on to offer girls and their parents a map and a method for finding a realistic and livable balance. Stories and quotations from girls who have struggled with eating disorders give the book immediacy, and exercises and writing suggestions steer girls toward a healthy self-image and wholesome eating patterns.</p>	<p>-Young Adults -Body Image -Prevention</p>	1

The Broken Mirror	-Katharine A. Phillips, M.D.	1996	In a world obsessed with appearances, it is not surprising that body dysmorphic disorder, or BDD, has manifested itself as a troubling and relatively common problem for many individuals. In The Broken Mirror, the first and most definitive book on BDD, Dr. Katharine Phillips draws on years of clinical practice, scientific research, and professional evaluations of over 700 patients to bring readers her expertise and experience with this often debilitating illness. BDD causes sufferers to be obsessed by perceived flaws in their appearance and may afflict as much as two percent of the population, or nearly five million people. Many sufferers are able to function well in society, but remain secretly obsessed by their "hideous acne" or "horrible nose," sneaking constant peeks at a pocket mirror, or spending hours at a time redoing makeup. Others find their lives disintegrate because of their appearance obsessions. It is not an	-Body Dysmorphic Disorder	3

			uncommon disorder, simply a hidden one, since sufferers are often embarrassed to tell even their closest friends about their concerns. The author presents the stories and interviews of over 200 individuals to show the many different behaviors and symptoms of BDD, and includes a quick self-assessment questionnaire. Four new chapters provide updated information on treatment of BDD, frequently obtained treatments to be avoided, and more detailed advice for family members and friends on how to cope with the disorder.

Reviving Ophelia: Saving the Selves of Adolescent Girls	-Mary Pipher, PhD	1994	As a therapist, Mary Pipher was becoming frustrated with the growing problems among adolescent girls. Why were so many of them turning to therapy in the first place? Why had these lovely and promising human beings fallen prey to depression, eating disorders, suicide attempts, and crushingly low self-esteem? The answer hit a nerve with Pipher, with parents, and with the girls themselves. Crashing and burning in a “developmental Bermuda Triangle,” they were coming of age in a media-saturated culture preoccupied with unrealistic ideals of beauty and images of dehumanized sex, a culture rife with addictions and sexually transmitted diseases. They were losing their resiliency and optimism in a “girl-poisoning” culture that propagated values at odds with	-Young Adults -Body Image -Media	1

Told in the brave, fearless, and honest voices of the girls themselves who are emerging from the chaos of adolescence, Reviving Ophelia is a call to arms, offering important tactics, empathy, and strength, and urging a change where young hearts can flourish again, and rediscover and reengage their sense of self.

Your Child's Weight: Helping Without Hurting: Birth Through Adolescence	-Ellyn Satter, RD, LCSW	2005	As much about parenting as feeding, this latest release from renowned childhood feeding expert Ellyn Satter considers the overweight child issue in a new way. Combining scientific research with inspiring anecdotes from her decades of clinical practice, Satter challenges the conventional belief that parents must get overweight children to eat less and exercise more. In the long run, she says, making them go hungry and forcing them to be active makes children preoccupied with food, prone to overeating, turned off to activity, and likely to gain too much weight. Trust is a central theme here: children must be able to trust parents to provide as much food as they need to satisfy their appetites; parents must trust children to eat only as much as they need. Satter provides compelling evidence that, if parents do their jobs with respect to feeding, children are remarkably capable of knowing how much to eat.	-Children -Family Dynamics -Prevention	1
